

- **Standard mode - Also known as OSC (open, stop, close) mode**

In this mode the control card waits for each instruction from the user.

From the closed position;

1. BT trigger starts the opening sequence,
2. 2nd BT trigger or open limit stops the opening sequence,
3. 3rd BT trigger starts the closing sequence,
4. 4th BT trigger or closed limit stops the closing sequence.....repeatable.
